

# Installing Tailwind CSS in Vite + React

---

## 1. Create your Vite + React app (if not already done):

```
npm create vite@latest my-app --template react
cd my-app
```

## 2. Install Tailwind CSS and its dependencies:

```
npm install -D tailwindcss postcss autoprefixer
npx tailwindcss init -p
```

## 3. Configure tailwind.config.js:

```
/** @type {import('tailwindcss').Config} */
export default {
  content: [
    './index.html',
    './src/**/*.{js,ts,jsx,tsx}',
  ],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

## 4. Add Tailwind directives to your CSS (src/index.css):

```
@tailwind base;
@tailwind components;
@tailwind utilities;
```

## 5. Import the CSS in your main.jsx:

```
import './index.css';
```

## 6. Run the development server:

```
npm run dev
```

## ✓ You're done!

Tailwind CSS should now be working in your Vite + React app. Try adding a class like `bg-blue-500 text-white` to any element to test it.
